Service Breakdown

Every service we offer — what it is, why it matters, and how we deliver it.

fjmedia.ca

PACKAGE 01

Get Online

\$300 · One-time

Need to be online fast? A clean, custom page — live in days. Covers event sites, landing pages, linktrees, and simple one-page sites.

Custom One-Page Site

WHAT IT IS

A single, hand-coded page designed for one purpose — whether that's an event, a link hub, or a quick-launch landing page.

THINK OF IT THIS WAY

Like a pop-up shop vs. a full storefront. Fast to set up, designed to do one thing well, and gets you online immediately.

WHY IT MATTERS

Not every business needs a 7-page site on day one. But every business needs to exist online. A clean one-page site beats no site every time.

HOW WE SOLVE IT

We build a focused, mobile-ready page with your branding, live in days. No templates, no drag-and-drop — hand-coded to look professional from the start.

Mobile Optimization

WHAT IT IS

Your page is coded to look and work perfectly on phones, tablets, and desktops.

THINK OF IT THIS WAY

Over 60% of web traffic comes from phones. If your page breaks on mobile, most of your audience never sees it properly.

WHY IT MATTERS

Google ranks mobile-friendly sites higher. A page that doesn't work on a phone loses the customer and the ranking.

HOW WE SOLVE IT

Every page we build is responsive from the first line of code — tested across screen sizes before it goes live.

Free Hosting

WHAT IT IS

Your page hosted on GitHub Pages at no monthly cost — fast, reliable, and included in the price.

THINK OF IT THIS WAY

Like free rent for your digital storefront. No \$30–50/month hosting bills eating into your bottom line.

WHY IT MATTERS

Monthly hosting fees add up fast and create friction for small businesses. Eliminating that cost means the site pays for itself sooner.

HOW WE SOLVE IT

We deploy to GitHub Pages with SSL included. Fast load times, no downtime, no bills.

PACKAGE 02

Get Found

\$600 · One-time

The foundation. A clean, professional website that makes your business look legitimate and findable online.

Custom Website (5–7 Pages)

WHAT IT IS

A professionally designed, multi-page website built by hand — not a template, not a drag-and-drop builder. Includes Home, About, Services, Gallery, and Contact pages.

THINK OF IT THIS WAY

Think of it as your digital storefront. Just like a clean, well-lit shop front gets more walk-ins, a professional website gets more clicks — and more calls.

WHY IT MATTERS

81% of people research a business online before visiting or buying. If your online presence looks amateur, they move on to a competitor before you even know they existed.

HOW WE SOLVE IT

We build a custom site in under 14 days. You send us your logo and a few photos — we handle design, layout, and copy. No templates. No builders. Built to convert.

Mobile Optimization

WHAT IT IS

Your website is coded to look and work perfectly on phones, tablets, and desktops — every screen size, without compromise.

THINK OF IT THIS WAY

Over 60% of web traffic comes from phones. A site that isn't mobile-ready is like having a store with a door too small to walk through — most of your customers can't get in.

WHY IT MATTERS

Google ranks mobile-friendly sites higher in search results. If your site breaks or looks off on a phone, you lose the customer and the ranking at the same time.

HOW WE SOLVE IT

Every site we build is hand-coded with responsive design — tested across screen sizes before it goes live. Mobile isn't an afterthought, it's built in from the first line of code.

Contact Form

WHAT IT IS

A form embedded on your website where customers can send their name, email, and message directly to you — without needing to find a phone number or copy an email address.

THINK OF IT THIS WAY

It's your business's inbox, built into the website. A customer lands on your page at 11pm — they can't call you, but they can fill out a form and hit send. That lead shows up in your inbox by morning.

WHY IT MATTERS

Every barrier between a customer and a business costs you money. A contact form removes friction and captures leads 24 hours a day, 7 days a week — even when you're off the clock.

HOW WE SOLVE IT

We build and connect a contact form that sends every inquiry straight to your email. Instant delivery, every time — no setup required on your end.

Domain Connection + Hosting

WHAT IT IS

Your custom web address (e.g., yourbusiness.com) connected and live on the internet so customers can actually find your site.

THINK OF IT THIS WAY

Your domain is your street address. Without it, your website has no location — it exists, but nobody can reach it. A custom domain turns a website into a real business presence.

WHY IT MATTERS

A branded domain looks professional, is easier to remember, and builds trust the moment someone sees it. Generic links signal amateur. A real domain signals legitimacy.

HOW WE SOLVE IT

We handle the full setup — domain configuration, GitHub Pages hosting, and everything in between. You don't touch a single technical setting.

PACKAGE 03

Get Customers

\$1,000 · One-time · Most Popular

Everything in Get Found — plus the backend that turns your website into a lead machine. Forms that think, data that logs itself, and Google knowing your business exists.

Order / Booking Form with Live Pricing

WHAT IT IS

A smart form that shows customers pricing in real time as they select services or options — and lets them place an order or book directly from your site.

THINK OF IT THIS WAY

Like a cashier that calculates your total while you shop, before you ever reach the counter. Customers see the price update as they pick their options — no back-and-forth, no guessing.

WHY IT MATTERS

Customers want to know what things cost before they commit. Showing pricing live removes the 'how much is this?' barrier and speeds up the decision. Ambiguity kills conversions.

HOW WE SOLVE IT

We build a custom form with dropdowns, checkboxes, or quantity selectors that update the total automatically. Works on every device. Every submission is clean and actionable.

Google Sheets CRM

WHAT IT IS

Every form submission from your website gets automatically saved to a Google Sheet — organized by date, name, contact info, service selected, and message.

THINK OF IT THIS WAY

Like having a receptionist who writes down every customer inquiry in an organized notebook — except it's automatic, timestamped, and always searchable.

WHY IT MATTERS

Without a log, leads get lost. An email gets buried, a tab gets closed — and that customer never hears from you again. Lost leads are lost revenue.

HOW WE SOLVE IT

We connect your site's forms to a Google Sheet using Google Apps Script. Every submission logs itself the moment it's sent. You open the sheet and your leads are all there, in order.

Automated Email Notifications

WHAT IT IS

The moment someone fills out your form, you receive an email alert with their full details — name, contact info, and what they need.

THINK OF IT THIS WAY

Like a doorbell for your business. Every time a new customer knocks, you hear it immediately — no matter where you are or what you're doing.

WHY IT MATTERS

Speed of response is a competitive edge. The business that replies first wins the customer. You can't reply fast if you don't know the inquiry came in.

HOW WE SOLVE IT

We set up a Google Apps Script that fires an email to you the instant any form is submitted. Name, contact, what they need — delivered to your inbox in seconds.

Google Business Profile Setup

WHAT IT IS

Your business listed and optimized on Google Maps and Google Search — so when someone in Winnipeg searches for your service, your name shows up.

THINK OF IT THIS WAY

Like being listed in the Yellow Pages — except the Yellow Pages that 8 billion people use every day, on every device, in every city.

WHY IT MATTERS

GBP listings appear above regular websites in local searches. Businesses with optimized profiles get more calls, more direction requests, and more trust — for free.

HOW WE SOLVE IT

We set up or optimize your GBP with your business name, category, service area, hours, description, and photos. You get verified and visible where local customers are searching.

On-Page SEO

WHAT IT IS

The behind-the-scenes text and code that tells Google exactly what your business is, where it operates, and who it serves — built into every page of your site.

THINK OF IT THIS WAY

Like labelling every item in a warehouse so the staff (Google) can find and deliver exactly the right product to the right customer. Without labels, nothing gets found.

WHY IT MATTERS

Without SEO, your site is invisible to search engines. You can have the best-looking website in Winnipeg and still not show up when someone searches for your service.

HOW WE SOLVE IT

We write and install your title tags, meta descriptions, local keywords, Open Graph tags, and Local Business schema markup — all built in from day one, not added as an afterthought.

PACKAGE 04

Own the Market

\$1,600 · One-time

Everything in Get Customers — plus the data layer that shows you exactly what's working, where customers are finding you, and how your site performs month over month.

Google Analytics Setup

WHAT IT IS

A tracking system installed on your site that records how many people visit, where they came from, which pages they viewed, and how long they stayed.

THINK OF IT THIS WAY

Like security cameras for your website. You can see exactly who's coming in, what they're looking at, and when they leave — so you know what's drawing people in and what's pushing them away.

WHY IT MATTERS

Without data, you're guessing. With data, you know what's working and what's not — and you can make decisions that actually grow your business instead of hoping for the best.

HOW WE SOLVE IT

We install Google Analytics 4 on your site and connect it to your Google account. From day one, every visitor is tracked. You always have numbers to look at.

Google Search Console

WHAT IT IS

A Google tool that shows you what search terms people are using to find your site, how often you appear in results, and whether Google can properly read your pages.

THINK OF IT THIS WAY

Like a report card from Google. It tells you exactly where you stand in search results, what keywords bring people to your door, and what needs to improve.

WHY IT MATTERS

Search Console is the only direct line of communication between your site and Google. It surfaces crawl errors, ranking positions, and real keyword data you can't get anywhere else.

HOW WE SOLVE IT

We add your site to Search Console, verify ownership, and submit your sitemap so Google indexes your pages immediately — no waiting weeks for Google to find you on its own.

Monthly Performance Snapshot

WHAT IT IS

A monthly summary of your website's key numbers — visitors, form submissions, top traffic sources, and search ranking positions — delivered to you in plain language.

THINK OF IT THIS WAY

Like a monthly business report, but for your digital presence. You see exactly what your site did for you that month, in numbers you can actually understand.

WHY IT MATTERS

Data keeps you accountable and shows clients the value they're getting. Seeing results — even small ones — reinforces why the investment made sense and why they should keep the site live.

HOW WE SOLVE IT

We pull the data from Analytics and Search Console every month and deliver a clean summary. No jargon, no dashboards to log into — just the numbers that matter, explained clearly.

MONTHLY RETAINERS

Keep It Growing

After your included months expire

Maintain — \$150/month

WHAT IT IS

Monthly check-ins on your site's forms, backend scripts, and content — plus a basic analytics report and any small updates you need made.

THINK OF IT THIS WAY

Like a property manager for your website. You don't have to think about it — someone else makes sure everything keeps running, nothing breaks, and your information stays current.

WHY IT MATTERS

Websites break. Forms stop working. Prices change. Hosting configurations shift. Without ongoing maintenance, small problems become big ones — and customers hit dead ends you don't even know about.

HOW WE SOLVE IT

We monitor your forms, Google Apps Script automations, and site performance every month. Anything that needs fixing gets handled before you even notice it was broken.

Grow — \$300/month

WHAT IT IS

Everything in Maintain — plus ongoing content updates, local SEO monitoring, and a monthly one-on-one review of your site's data to plan next steps together.

THINK OF IT THIS WAY

Like having a part-time digital marketing manager. Someone who keeps your site updated, watches your rankings, and sits down with you once a month to review what's working and what to do next.

WHY IT MATTERS

A site that never changes loses rankings and relevance. Google rewards sites that stay active. Growth requires consistent updates and someone actively watching your numbers — not just hoping things improve on their own.

HOW WE SOLVE IT

Monthly content updates (menus, pricing, photos, seasonal changes), local SEO monitoring via Search Console, and a monthly sit-down to review Analytics data and plan the next move. You stay in the loop, we do the work.
