

Get Found — \$600

\$600 One-Time

A professional presence that works. Entry-level site for businesses that need to look legitimate online.

What's Included

- Custom 5–7 page website (Home, About, Services, Gallery, Contact)
- Mobile-optimized, hand-coded HTML/CSS/JS
- Contact/inquiry form (Web3Forms)
- GitHub Pages hosting (free URL for client approval)
- Custom domain connection after client approval
- 1 month of free changes after launch

Fulfillment Steps

STEP 1

Intake — Gather Everything Upfront

- Ask for: logo, brand colors, fonts (if any)
- Ask for: real content — services list, pricing, contact info, about blurb
- Ask for: any photos or confirm you'll use stock
- Confirm business name, address, hours, phone, email
- Confirm preferred domain name (check availability on Namecheap)

STEP 2

Build the Website

- Create folder: FJMedia/Websites/[Client Name]/
- Build single HTML file: Website.html
- Sections: Hero, About, Services, Gallery, Contact
- Wire contact form to Web3Forms using client's access key
- Mobile-first — test all breakpoints before preview
- No placeholder text, no placeholder images in final build

STEP 3

Internal QA Before Preview

- All buttons and links work
- Contact form submits and sends email confirmation
- No broken images
- Mobile nav opens and closes properly
- No overlapping elements or z-index issues
- All copy reviewed — no typos, correct business name throughout

STEP 4

Deploy to GitHub Pages (Preview URL)

- Create empty public repo on GitHub under fjdmedia account
- Push from project folder: git init → git add . → git commit → git push
- Enable GitHub Pages: Settings → Pages → Branch: master → root → Save
- Share preview URL with client: fjdmedia.github.io/[repo-name]
- Do NOT buy domain yet — wait for client approval

STEP 5

Client Approval

- Present preview URL on a call or screen share if possible
- Walk through each section — ask for feedback
- Make any requested changes (up to 2 revision rounds included)
- Get explicit written or verbal approval before going to domain step
- Collect payment via e-transfer before domain purchase

STEP 6

Custom Domain Setup (after approval + payment)

- Buy domain on Namecheap (~\$10–15/yr)
- Add custom domain in GitHub Pages settings
- Update DNS records on Namecheap to point to GitHub Pages
- Wait for SSL to activate (GitHub handles this automatically — up to 24hrs)
- Confirm live domain works on mobile + desktop

STEP 7

Handoff

- Send client the live URL
- Remind them of their 1 month of free changes
- Let them know you're available for questions
- Pitch the Get Customers upgrade or Maintain retainer (\$150/mo)
- Request a written testimonial within 30 days of launch
